

TEKPROS

IBM Tivoli provides a comprehensive portfolio of security, risk and compliance management software, hardware and services to meet the challenges of securing a dynamic infrastructure:

Managing Risk by developing and managing a secure infrastructure that allows organizations to support business change.

Improving Service by delivering superior business and IT services with agility and speed and preventing outages.

Reducing Cost of management, administration and operation of the secure infrastructure while increasing productivity.

The IBM security framework offers end to end protection with compliance reporting across people and identities, data and information, applications and processes, IT and physical infrastructure.

IBM Tivoli security management solutions deliver the visibility, control and automation organizations need in the following areas:

Identity and Access Assurance: efficient user lifecycle administration and access controls with integrated auditing.

Data and Application Security: for fine grained application entitlements, centralized security policy management and centralized encryption key lifecycle management.

Security Management for z/OS: enhanced security administration, user management and compliance reporting which enables the mainframe to serve as the enterprise security hub.

Compliance Management with automated user activity monitoring, tracking, reporting and remediation is an integral part of all of the IBM offerings.

The IBM Security Threat Mitigation solutions offer end-to-end risk management solutions to protect against the latest threats while reducing the costs and complexity of security.

IBM Tivoli Endpoint Manager helps you achieve smarter, faster endpoint management.

IBM Security Virtual Server Protection for VMware offers integrated threat protection for VMware vSphere 4 that provides security for every layer of the virtual infrastructure, including host, network, hypervisor, virtual machine (VM) and traffic between VMs.

IBM Security Network Intrusion Prevention System Blocks network threats with security convergence of IBM Virtual Patch® technology, client side application protection, advanced IPS, data security, web application protection and application control.

TEKPROS is an IBM Business Partner that is specialized in licensing and implementing solutions to a broad range of clients and Fortune 1000 Companies. We are authorized as a Solutions Provider and Implementation Partner for IBM Hardware and Software Products. TEKPROS is a Certified Minority Business Enterprise that provides IT Solutions, IT Services, SI, VAR, Cloud, Mobility and Security Solutions and has been recognized as one of the fastest growing American companies by INC. Magazine for the last 3 years in a row.

TEKPROS Security Services Offerings:

TEKPROS matches your security goals and needs with effective practices, technologies, and services. We can offer a comprehensive package of services to test and secure your security posture inside and out, or focus on specific applications or systems. We help put resources in the right places to give you peace of mind and let you stay focused on your business and your clients. Our security solutions include:

External Vulnerability Testing and Analysis. Testing your systems to provide a view of the network perimeter and identifying vulnerabilities. The end result is that you can find and fix problems before they can be exploited, without having to maintain the internal expertise to stay abreast of the ever-changing landscape of threats and vulnerabilities.

Internal Assessment. TEKPROS internal security assessment process systematically checks your network and applications. We bring the experience and tools to audit a wide variety of systems, including directory and user-level authentication services, network operation systems, LAN infrastructure, and desktop and mobile devices.

Application Review and Testing. TEKPROS will test and analyze vulnerabilities in off-the-shelf software and can also test your homegrown or customized applications against common exploits and attack techniques. The process starts with a look at which data is most sensitive and where that data resides, so you can prioritize protective strategies.

IBM X-Force Research and Development is one of the most renowned commercial security research and development teams in the world. This group of security experts researches and evaluates vulnerabilities and security issues, develops assessment and countermeasure technology for IBM products and educates the public about emerging Internet threats.
